PROFESSIONAL SUMMARY

Driven BTech student in CS & AI with strong full-stack development skills across modern web technologies. Experienced in building production-grade applications with React, Node.js, Next.js, and PostgreSQL. Comfortable with real-time systems, RESTful API design, authentication flows, and database architecture. Committed to writing clean, scalable code and shipping polished user experiences.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Canvas API

Backend: Node.js, Express.js, FastAPI, Python, REST APIs

Databases: PostgreSQL, MySQL, MongoDB, Prisma ORM

Auth & Security: JWT

Tools: Git, GitHub, Postman, VS Code

PROJECTS

Mentor Connect — Full-Stack Student Mentorship Platform

2024

React.js, Node.js, Express.js, PostgreSQL, Prisma ORM, JWT, Tailwind CSS

- Built a full-stack web application enabling mentor-student interaction with resource sharing, quizzes, and real-time chat.
- Implemented secure JWT-based authentication with role-based access control distinguishing mentor and student permissions.
- Designed a relational database schema using Prisma ORM on PostgreSQL covering users, resources, quizzes, and sessions.
- Developed comprehensive CRUD operations across all core entities with proper input validation and error handling.

FDF— Real-Time Collaborative Ordering App

2024

Next.js, Node.js, Socket.IO, WebSockets, PostgreSQL, Tailwind CSS

- Built a real-time group ordering platform supporting simultaneous cart updates across multiple users via WebSockets.
- Developed a custom split engine to automatically calculate per-person cost breakdowns for group orders.
- Designed a UPI-based payment settlement system to simplify bill splitting with minimal friction.
- Implemented responsive UI with live sync — changes reflect instantly for all participants in a session.

VENOM CAM — Real-Time ASCII Camera

2024

JavaScript, Canvas API, HTML5, CSS

- Built a browser-based real-time ASCII art camera leveraging the Canvas API for pixel capture and rendering.
- Implemented pixel-to-character mapping algorithm to convert live video frames into ASCII representations in real time.
- Added user customization features (character sets, brightness, contrast) and export functionality for saving outputs.

FinSight AI — Financial Analytics Platform

2024

React, TypeScript, FastAPI, Python, Tailwind CSS

- Developed a responsive frontend with interactive financial dashboards and chart visualizations.
- Designed and implemented REST APIs for data upload, analysis, AI insights, and chart generation.
- Integrated ML-powered expense categorization backend with a clean TypeScript React frontend.

EDUCATION

Bachelor of Technology — Computer Science & AI

Expected 2028

Rishihood University, Sonipat

CERTIFICATIONS & ACHIEVEMENTS

- Problem Solving (Basic & Intermediate) — HackerRank (August 2024)

- Python (Basic) — HackerRank (June 2024)
- 300+ LeetCode problems solved — strong algorithmic foundation for efficient software design
